

Ideation Phase

Define the Problem Statements

Date	3 October 2026
Team ID	SWTID-2026-4184
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand the customer's point of view. For this ServiceNow project, the customer perspective focuses on importing employee spreadsheet data accurately, mapping it to the appropriate target fields, preventing duplicate records, and validating the resulting employee data.

A well-articulated problem statement helps the team understand the challenges faced during spreadsheet data migration and provides a clear basis for an Import Set and Transform Map workflow.

Reference: ServiceNow Import Data using Transform Maps source document

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	HR / ServiceNow user	import bulk employee data from an external spreadsheet into ServiceNow efficiently and accurately	the employee data must first be loaded into an Import Set table and then mapped from source fields to the correct target-table fields	the spreadsheet data needs a structured staging, field-mapping and transformation process before the employee records can be created in the target table	concerned about data integrity and the accuracy of imported employee records
PS-2	ServiceNow administrator	repeat employee-data imports while keeping the target employee table clean and up to date	the same employee data can be imported more than once, with some existing records receiving changed values	repeated imports require a reliable way to identify existing employees and update them instead of inserting duplicate records	concerned about duplicate records and inconsistent employee data
