

Ideation Phase

Empathize & Discover

Date	3 October 2026
Team ID	SWTID-2026-4184
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. For this ServiceNow project, the map focuses on the users involved in importing and maintaining employee data through Import Sets and Transform Maps.

The exercise considers the user's goals and challenges during spreadsheet preparation, data loading, field mapping, transformation, duplicate prevention and validation.

Reference: ServiceNow Import Data using Transform Maps source document

Empathy Map

Think & Feel	• Wants employee imports to be accurate and efficient. • Worries about incorrect field mapping and data integrity. • Wants repeated imports to update existing records rather than create duplicates.
Hear	• Instructions to prepare spreadsheet data. • Guidance to create an Import Set table. • Guidance to map source and target fields and run the transform.
See	• Excel/Google Spreadsheet employee data. • ServiceNow Load Data and Import Set screens. • Transform Map, Transform History, Employee Test table, reports and dashboard.
Say & Do	• Loads the spreadsheet into ServiceNow. • Creates/configures the target Employee Test table. • Uses Mapping Assist and Auto Map. • Runs Transform and checks inserted/updated records.
Pain	• Incorrect or incomplete field mapping. • Duplicate employee records from repeated imports. • Need to verify whether records were inserted, updated or ignored.
Gain	• Accurate employee data in the target table. • Duplicate prevention using Coalesce. • Clear validation through Transform History. • Reports and dashboards for visibility.

Example: ServiceNow Employee Data Import & Transformation

Think & Feel

- Wants employee imports to be accurate and efficient.
- Worries about incorrect field mapping and data integrity.
- Wants repeated imports to update existing records rather than create duplicates.

Hear

- Instructions to prepare spreadsheet data.
- Guidance to create an Import Set table.
- Guidance to map source and target fields and run the transform.

See

- Excel/Google Spreadsheet employee data.
- ServiceNow Load Data and Import Set screens.
- Transform Map, Transform History, Employee Test table, reports and dashboard.

Say & Do

- Loads the spreadsheet into ServiceNow.
- Creates/configures the target Employee Test table.
- Uses Mapping Assist and Auto Map.
- Runs Transform and checks inserted/updated records.

Pain

- Incorrect or incomplete field mapping.
- Duplicate employee records from repeated imports.
- Need to verify whether records were inserted, updated or ignored.

Gain

- Accurate employee data in the target table.
- Duplicate prevention using Coalesce.
- Clear validation through Transform History.
- Reports and dashboards for visibility.
