

Project Design Phase-II

Data Flow Diagram & User Stories

Date	3 October 2026
Team ID	SWTID-2026-4184
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a visual representation of information flows within a system. For this project, the DFD shows how employee spreadsheet data enters ServiceNow, moves through the Import Set staging table and Transform Map, reaches the Employee Test target table, and is validated and monitored.

Example: (Simplified)

Source Spreadsheet	→	Employee Import (Import Set)	→	Sample Spreadsheet Import (Transform Map)
		↓		
		Employee Test (Target Table)	→	Validation / Reports

Flow: Spreadsheet → Import Set staging → Transform Map field mapping → Employee Test → Transform History/validation → Reports & Dashboard. Coalesce is used during repeated imports to update matching records rather than insert duplicates.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow Administrator	Spreadsheet Preparation	USN-1	As an administrator, I can prepare structured employee data in a spreadsheet with the required fields.	Employee ID, Employee Name, Email, Department and Location are available in the source data.	High	Sprint-1
ServiceNow Administrator	Target Table	USN-2	As an administrator, I can create the Employee Test custom table and configure its employee fields.	Employee Test table is created and required fields are visible on the form.	High	Sprint-1
ServiceNow Administrator	Import Set	USN-3	As an administrator, I can load the spreadsheet and create the Employee Import staging table.	The Employee Import table is created successfully and is available for transformation.	High	Sprint-1
ServiceNow Administrator	Transform Map	USN-4	As an administrator, I can create Sample Spreadsheet Import and map source fields to target fields.	Source and target tables are selected and all required fields are mapped.	High	Sprint-1
ServiceNow Administrator	Transform & Validation	USN-5	As an administrator, I can transform the imported data and verify the created records.	Transform completes successfully and records appear in Employee Test.	High	Sprint-1
ServiceNow Administrator	Duplicate Prevention	USN-6	As an administrator, I can enable Coalesce on an appropriate field so repeated imports update matching records.	Existing matching records are updated and duplicate records are not inserted.	High	Sprint-2
ServiceNow Administrator	Repeated Import	USN-7	As an administrator, I can load additional Excel data into the existing Employee Import table.	The new spreadsheet is submitted and can be transformed using the existing Transform Map.	Medium	Sprint-2
ServiceNow Administrator	Reporting	USN-8	As an administrator, I can create reports and an Employee Analytics Dashboard for the imported data.	Reports and dashboard provide visibility into employee data and import results.	Medium	Sprint-2
