

Problem-Solution fit canvas 2.0

Purpose / Vision

1. CUSTOMER SEGMENT(S)	ServiceNow administrators / users responsible for importing employee data from spreadsheets into ServiceNow.
2. JOBS-TO-BE-DONE / PROBLEMS	Import employee spreadsheet data accurately; map source fields to target fields; transform and validate records; avoid duplicate employee records during repeated imports.
3. TRIGGERS	Need to load employee data from an Excel spreadsheet; repeat an import with additional or changed employee data; verify that imported records were created or updated correctly.
4. EMOTIONS: BEFORE / AFTER	Before: concern about incorrect mapping, duplicate records and whether the import succeeded. After: greater confidence when the Transform completes successfully and records can be checked in the target table and Transform History.
5. AVAILABLE SOLUTIONS	Spreadsheet preparation plus ServiceNow Load Data / Import Set, Transform Map, Auto Map / Mapping Assist, Transform History, Coalesce, reports and Employee Analytics Dashboard.
6. CUSTOMER CONSTRAINTS	The workflow depends on correctly structured spreadsheet fields, correct source-to-target mappings and a suitable matching field for Coalesce. The source does not specify budget, device or network constraints.
7. BEHAVIOUR	Prepare the spreadsheet; create/configure the Employee Test table; load data; create/configure the Transform Map; map fields; run Transform; inspect results; repeat imports; use Coalesce; create reports/dashboard.
8. CHANNELS of BEHAVIOUR	8.1 ONLINE: ServiceNow web interface, including Load Data, Import Sets, Transform Maps, Transform History, reports and dashboard. 8.2 OFFLINE: Excel/Google Sheets preparation and local spreadsheet file selection before upload.
9. PROBLEM ROOT CAUSE	Employee data originates in a spreadsheet while target employee records must conform to the ServiceNow table structure. A controlled staging, mapping and transformation process is therefore needed, especially when imports are repeated.
10. YOUR SOLUTION	A ServiceNow Import Set + Transform Map workflow: load spreadsheet data into Employee Import, map it to Employee Test, transform and validate the records, use Coalesce to update matching employees instead of creating duplicates, and provide reports/dashboard visibility.

Source-grounded content. Where the source did not explicitly specify customer constraints or emotions, the canvas uses cautious interpretations tied to the documented import workflow.
