

Project Design Phase

Proposed Solution Template

Date	3 october 2026
Team ID	SWTID-2026-4184
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employee data is maintained in spreadsheet form and must be imported into ServiceNow accurately. The process needs controlled staging, source-to-target field mapping, transformation and validation, while repeated imports must avoid creating duplicate employee records.
2.	Idea / Solution description	Use ServiceNow Import Sets and Transform Maps to import employee spreadsheet data. Load the spreadsheet into the Employee Import staging table, map the source fields to the Employee Test target table using Auto Map/Mapping Assist, run the Transform, verify the results through the target table and Transform History, and use Coalesce to update matching records during repeated imports. Reports and the Employee Analytics Dashboard provide visibility.
3.	Novelty / Uniqueness	The source's solution combines a staging Import Set, a Transform Map with field mapping, transformation validation and Coalesce-based duplicate prevention into a repeatable employee-data import workflow. It also extends the workflow with reports and an Employee Analytics Dashboard.
4.	Social Impact / Customer Satisfaction	The solution supports more accurate and consistent employee-data management by reducing duplicate records and providing a structured way to validate imported data. Successful transformations, Transform History, reports and the dashboard give administrators visibility into the resulting employee records.
5.	Business Model (Revenue Model)	The supplied source document describes the technical workflow but does not specify a business model, pricing model, revenue stream or monetization strategy.
6.	Scalability of the Solution	The workflow supports bulk employee-data imports and repeated imports by reusing the Employee Import staging table and configured Transform Map. Coalesce allows matching records to be updated during repeated imports, while reports and the dashboard support ongoing visibility as employee data is maintained.
