

Project Design Phase

Solution Architecture

Date	3 october 2026
Team ID	SWTID-2026-4184
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Solution Architecture:

The solution architecture bridges the employee-data import problem and the ServiceNow technology workflow. The architecture uses a spreadsheet as the source, ServiceNow Load Data and an Import Set as the staging layer, a Transform Map for source-to-target mapping and transformation, the Employee Test table as the target, Transform History for validation, and reports/dashboard for visibility. Coalesce supports repeated imports by matching existing employee records.

Example - Solution Architecture Diagram:

Source	Employee Spreadsheet	Structured employee data
Ingestion	ServiceNow Load Data	Loads spreadsheet into staging
Staging	Employee Import (Import Set)	Temporary/staging import table
Transformation	Sample Spreadsheet Import (Transform Map)	Maps source fields to target fields
Target	Employee Test	Stores transformed employee records
Validation	Transform History	Checks transformation results
Monitoring	Reports / Employee Analytics Dashboard	Provides visibility

Additional control: Coalesce is configured on an appropriate field so repeated imports update matching records instead of inserting duplicate employee records.

Reference: Import Data using Transform Maps source document.
