

# PLANNING LOGIC

## Sprint

A Sprint is a fixed time period in which the selected stories are planned, developed, tested, and completed.

## Epic

An Epic is a large body of work that is divided into smaller user stories.

## Story

A Story is a small, user-focused requirement that describes a specific piece of functionality.

## Story Point

Story Points represent the relative effort, complexity, and uncertainty required to complete a story.

Scale used: 1, 2, 3, 5

## Sprint 1

| Epic                                     | Story / Task                                   | Story Points |
|------------------------------------------|------------------------------------------------|--------------|
| Data Preparation & Target Table (Epic 1) | Preparing Employee Spreadsheet (USN1)          | 2            |
| Data Preparation & Target Table (Epic 1) | Creating Employee Test Table (USN2)            | 2            |
| Import Set & Field Setup (Epic 2)        | Creating Employee Import Table (USN3)          | 2            |
| Import Set & Field Setup (Epic 2)        | Creating Employee Fields (USN4)                | 3            |
| Import Set & Field Setup (Epic 2)        | Creating Transform Map & Mapping Fields (USN5) | 3            |

**Total Sprint 1 = 12 Story Points**

## Sprint 2

| Epic                                | Story / Task                                        | Story Points |
|-------------------------------------|-----------------------------------------------------|--------------|
| Transform & Validation (Epic 3)     | Running Transform (USN6)                            | 2            |
| Transform & Validation (Epic 3)     | Validating Employee Test & Transform History (USN7) | 2            |
| Coalesce & Repeated Import (Epic 4) | Enabling Coalesce to Avoid Duplicates (USN8)        | 3            |
| Coalesce & Repeated Import (Epic 4) | Importing New/Changed Employee Data (USN9)          | 3            |
| Reporting & Dashboard (Epic 5)      | Creating Employee Reports (USN10)                   | 2            |
| Dashboard (Epic 6)                  | Creating Employee Analytics Dashboard (USN11)       | 2            |

**Total Sprint 2 = 14 Story Points**

**Total Story Points = 26**

**No. of Sprints = 2**

**Velocity = 26 / 2 = 13 Story Points per Sprint**

## Source Note

The planning logic is derived from the workflow described in the source document: prepare employee spreadsheet data, create the Employee Test target table and Employee Import Import Set table, create and map a Transform Map, transform and validate records, enable Coalesce for duplicate prevention, import new/changed data, and create reports and an Employee Analytics Dashboard.
